

# Protocol and Software Guidelines

Tuakiri supports the following protocols, software systems and versions.

Protocol	Level of Support
SAML 2.0	Supported
SAML 1.1	Not supported

OASIS provide high-level and technical overviews of SAML on their website: [https://www.oasis-open.org/committees/tc\\_home.php?wg\\_abbrev=security](https://www.oasis-open.org/committees/tc_home.php?wg_abbrev=security).

Software	
Shibboleth System 2.x and minor releases	Supported
Shibboleth System 1.3 and older	Not supported (Shibboleth 1.3 had its end-of-life on June 30, 2010)
Other SAML-based, federated identity management systems	Other software systems interoperable with SAML 2.0 and the Shibboleth architecture specifications may be used; however, such systems are not actively supported by Tuakiri support, nor tested within the federation operation infrastructure. Active support for systems other than Shibboleth will be considered as participant needs arise.

For more information on the Shibboleth system, specification, patches, and upgrades, visit [shibboleth.net](http://shibboleth.net) or join the [shibboleth-announce email list](#).
